

NETA GYM VOICE

Ask any Indian MP about their record.

A voice agent built on the AssemblyAI Voice Agent API.

786 MPs. Public Parliament data. Spoken, sourced answers.

Live: netagym-voice.onrender.com/talk

Code: github.com/neta-gym/mp-transparency-tracker

Team: Neta Gym

THE PROBLEM

Everything is public. Nobody looks.

- ▶ **Rich public data, zero access.** Attendance, questions, debates, declared assets and criminal cases for every MP are public - locked in PDFs and databases.
- ▶ **No voter-friendly interface.** PRS, Parliament portals and ADR affidavits are built for researchers, not citizens.
- ▶ **Trust gap.** Voters pick MPs on slogans because checking a record takes hours of digging.
- ▶ **Scale of the blind spot:** 786 MPs in the 18th Lok Sabha and Rajya Sabha - almost no one can name their own MP's attendance.

THE PRODUCT

Call. Ask. Get a sourced spoken answer.

1

Ask out loud

"What is Rajiv Pratap Rudy's attendance?" - plain words, no app to install, no jargon.

2

AssemblyAI runs the call

Streaming speech-to-text, turn-taking, and text-to-speech via the Voice Agent API.

3

The data brain answers

A deterministic tool looks up the MP's public record - and the agent speaks it, with the source.

Works in Hindi or English at the speech layer. 786 MPs indexed, 784 scored.
Same answers on the web: neta-gym.github.io/mp-transparency-tracker

REAL ANSWERS

Verified live on the deployed agent

What is the attendance of Rajiv Pratap Rudy?

"Rajiv Pratap Rudy, Bharatiya Janata Party MP from Saran, Bihar has attended 100 percent of Parliament sittings, with 36 questions asked."

How many questions has Asaduddin Owaisi asked?

"Asaduddin Owaisi, AIMIM MP from Hyderabad, Telangana has asked 29 questions in Parliament and taken part in 15 debates."

Tell me about Sanjay Kumar Jha.

"Sanjay Kumar Jha, Janata Dal (United) MP from Rajya Sabha (Bihar) scores 69.6 out of 100 on transparency."

What is the attendance of Rahul Gandhi?

"We don't have a reliable public source for Rahul Gandhi's attendance yet." - the agent says so instead of guessing.

Every figure is a database lookup from public sources - no LLM invents a number.

Neta Gym Voice - AssemblyAI Voice Agent Hackathon

ARCHITECTURE

A boring tool owns the truth.

- ▶ **Honest by design:** missing data (ministers, PRS gaps) returns a spoken null, never a guess.
- ▶ **Party-neutral:** the 0-100 transparency score uses public metrics only; full breakup published on the web tracker.

Public sources, honest gaps

- ▶ **Sources:** PRS Legislative Research, Lok Sabha / Rajya Sabha portals, ADR & myneta.info election affidavits.
- ▶ **Coverage:** 786 MPs indexed; 784 with a transparency score; 687 with attendance data.
- ▶ **Honest nulls:** ministers do not mark attendance by convention - shown as null, not zero. Coverage gaps (e.g. Rahul Gandhi) are said out loud.
- ▶ **No LLM in the data path:** the model only carries speech and conversation; every number is a lookup with a named source.
- ▶ **Neutral by construction:** the same scorecard formula applies to every party.

WHY IT MATTERS

A phone call beats a PDF

- ▶ **Access:** a first-time voter in Saran and a journalist in Delhi get the same instant, sourced answer - in the language they speak.
- ▶ **Trust:** spoken answers always cite the source and the public tracker link; honest nulls build credibility.
- ▶ **Timing:** AssemblyAI's Voice Agent API makes a production-grade call loop a weekend build - Neta Gym brings the data moat: 786 normalized MP records.
- ▶ **Reach:** voice works on any phone, including for voters who do not read English dashboards.

WHAT'S NEXT

Roadmap & links

- ▶ **Indic name matching** - Hindi-script name lookup on top of the bilingual speech layer.
- ▶ **Fund utilization data** - MPLADS spending answers when a reliable public source lands.
- ▶ **Outbound calls & WhatsApp** - meet voters where they already are.
- ▶ **Comparisons** - MP vs MP and party-level rollups in one answer.
